

## Estágio

We live in times where it is imperative that we move towards a circular economy which is kinder for us and the planet. [BuildbyBuild](#) is a construction company based in Lisbon, Portugal headed by [Kam Shams](#), a serial entrepreneur and philanthropist, with over 3 decades of experience in multi-national real estate development. Our core values are Quality Delivery, Fair Pricing and Long Term Sustainability.

In our drive towards expansion to become a pioneering firm in our industry in Portugal, we have a position available for an intelligent and innovative thinker to help us on our journey towards robust ESG (Environmental Social Governance) goals. The main purpose is to help the company set up accurate systems and reporting mechanisms around sustainability accounting. The candidate will play a key role in:

1. Researching sustainability reporting standards as applicable to the residential architecture category and designing an appropriate structure for the firm to self-report
2. Recommending systems and processes that would adequately measure and monitor these metrics on an ongoing basis
3. Work with others in the team on a roadmap towards implementing improvements in current practices

The ideal intern will have a personal passion for sustainability and a circular economy. Educational background or experience in Architecture or engineering is desirable.

Proficiency in English is a value-add. Experience with MS Office applications and other similar tools is a must.

In return, the intern will be given extensive mentoring on standard ESG practices and management reporting and the opportunity to work in a dynamic experienced team with international connections. Sustainability is a movement that is here to stay and this is a unique opportunity with a broad level of freedom to make your mark in this fast-growing space.
